Figure 79. Population density in Salem (left). Salem’s population is concentrated in the city center, primarily on the east side of the Willamette River. Like Portland’s urban core, density is lowest in the areas where office buildings and green spaces predominate.

Figure 80. Population density in Corvallis and Albany (below). The cities of Corvallis and Albany are both situated on the outer bank of a meandering curve of the Willamette River. Oregon State University is a focus for population density in Corvallis, whereas density in Albany is more evenly spread throughout the city.

Note: The facing page map uses the same legend.
