Habitat Elements for Biodiversity Associated with “Old-Growth” Stage

Attribute	OWL	Murrelet	R. Tree Vole	Canopy Lichen
Tree Dia (cm)	75	50-75	50	Wide range
Time Imp?	NO	NO	Maybe	Yes
Tree spp	No	Yes	Yes	Yes
Use Hwds ?	No	No	No	Yes
Spatial Scale	2.4 km	50 m	<50 m	<100 m

Forest Structure

Size and density of trees

Diversity of tree/canopy sizes

Spatial heterogeneity

Standing dead and down trees

Biological diversity measures In CLAMS

- **Species level**

- **Focal Species--habitat quality**
 - 15-20 species
- **Population viability**
 - Northern Spotted Owl habitat

- **Community level**

- Wildlife-Stand Types

Vertebrate Focal Species

Criterion	No. Spp.	Example
At Risk (listed)	13	Marbled Murrelet
Seral Stage	15	Willow flycatcher
Ecological Func	5	American Beaver
Keystone	1	Pileated Woodpeck.
Umbrella	3	N. Spotted Owl
Game	1	Elk
Public/Regulatory	5	Bald Eagle

Northern Spotted Owl Habitat Suitability Index

- **Nesting Suitability Index (patch)**
 - Density of trees > 100cm dbh/ha
 - Diameter Diversity Index
- **Foraging Suitability Index (patch/landscape level)**
 - Canopy height
 - Diameter Diversity Index
 - Habitat availability within 2.2 km of patch
- **$HSI = \text{SQRT} (NSI * FSI)$**

Biological diversity measures (cont.)

- **Ecosystem level**

- Stand structure
- Landscape pattern
- Landslide/debris flow potential
- Watershed-scale aquatic habitat indices
- Disturbance regime
- Range of variability in amounts of seral stages over last 3,000 years

Old-Growth Habitat Index (patch level)

- Density of trees > 100cm dbh/ha
- Diameter Diversity Index
- Density of large snags (>50cm dbh & >15m tall)
- Volume of down woody debris
- Age of dominant trees
- $OGHI = (V1 + V2 + V3 + V4 + V5) / 5$

Wimberly

Forest Development Pathways

Historical Range of Variation

Conclusions

- No single best approach to assessing biodiversity
- Use a variety of strategies: species-ecosystems
- Forest structure and composition are key
- Incorporate variability and dynamics
- Given complexity of systems and lack of information, surrogates and indicators are needed
- Measures and models are working hypotheses.
